EXPERIENCE

C# .NET Developer

September 2024 – Present

Zero Impact Energy

Costa Mesa, CA

- Developed the EVOLV Platform, supporting 1,000+ concurrent WebSocket connections across 300+ live sites, enabling real time monitoring and control of EV chargers with site specific configurations for users and organization administrators, developed with a C# .NET Core backend.
- Built monitoring and maintenance tools for EV charging stations by parsing JSON-based OCPP messages, with robust exception handling to ensure reliability and automated email alerts for disconnected chargers.
- Improved code quality by increasing test coverage and reducing cyclomatic complexity by 40% across the main repository secured all API and GraphQL endpoints against vulnerabilities with authentication requirements and optimized LINQ queries to reduce latency and improve performance.
- Tested and validated newly developed platform features across unit, integration, and system levels, supporting iterative releases while maintaining backward compatibility and system reliability.

Technical Mentor

Aug 2023 – May 2024

Tutors and Friends

La Jolla, CA

- Tutored students from middle school through college in multiple subjects, with an emphasis on computer science and programming fundamentals.
- For aspiring computer science students in high school developed a curriculum ranging from basic topics such as data types to data structures and algorithms delving into topics such as graph theory and greedy algorithms.

Azure DevOps Intern

June – September 2022

First American

Santa Ana, CA

- Developed a script that optimized the costs of AWS DynamoDB tables used by over 100 people in a developer environment. It used a YAML script that triggered every week in the Azure Pipeline. This script saved costs for DynamoDB tables by 78%
- Implemented automated pipeline scripts to audit and report recently updated AWS Lambda functions within defined time windows, improving deployment visibility and operational tracking.
- Worked with Git-based workflows in Azure Repos, following branching strategies and contributing to code reviews integrated into pipeline execution.

PROJECTS

HelpSphere | C#, .NET, Entity Framework Core, React, AWS RDS/S3

- Built a full-stack support ticketing system with a .NET Web API backend and React frontend, integrating secure user authentication.
- Implemented a rule-based smart-triage engine that automatically categorizes tickets by severity and department, reducing manual sorting and improving first-response times.

Rec League AI Analyzer | HTML, CSS, Javascript, Cheerio, OpenAI API

- Developed a Fantasy Football analytics platform that integrates with Yahoo, ESPN, and Sleeper APIs to import team data, evaluate rosters, and generate AI-based performance scores.
- Created an AI-powered Trade Analyzer leveraging the OpenAI API to evaluate proposed trades and provide commentary and fairness scores

EDUCATION

University of California, San Diego

La Jolla, CA

Bachelor of Science in Computer Engineering

2020 – 2024

TECHNICAL SKILLS

Languages: C#, .NET, Python, JavaScript, React, HTML, CSS, SQL

Developer Tools: Visual Studio 2022, VS Code, Git, Github, Azure, Cursor, Postman
